

- Guide your way to success with GPS
- Save costs through efficiencies gained
- Keep your records straight
- Trace every input
- Budget and plan with ease

and then integrate it all with one software package to streamline your farming business.

Now you can, with Farm Data Software and Hardware.

The only fully integrated software package on the market, **Farm Data Software** offers integrated solutions for software, hardware, GPS, yield mapping, record keeping, crop planning, mobile and desktop computing, accounting (cash and accrual), livestock and mapping. The best part is that all of the programmes integrate together to provide just one software package.

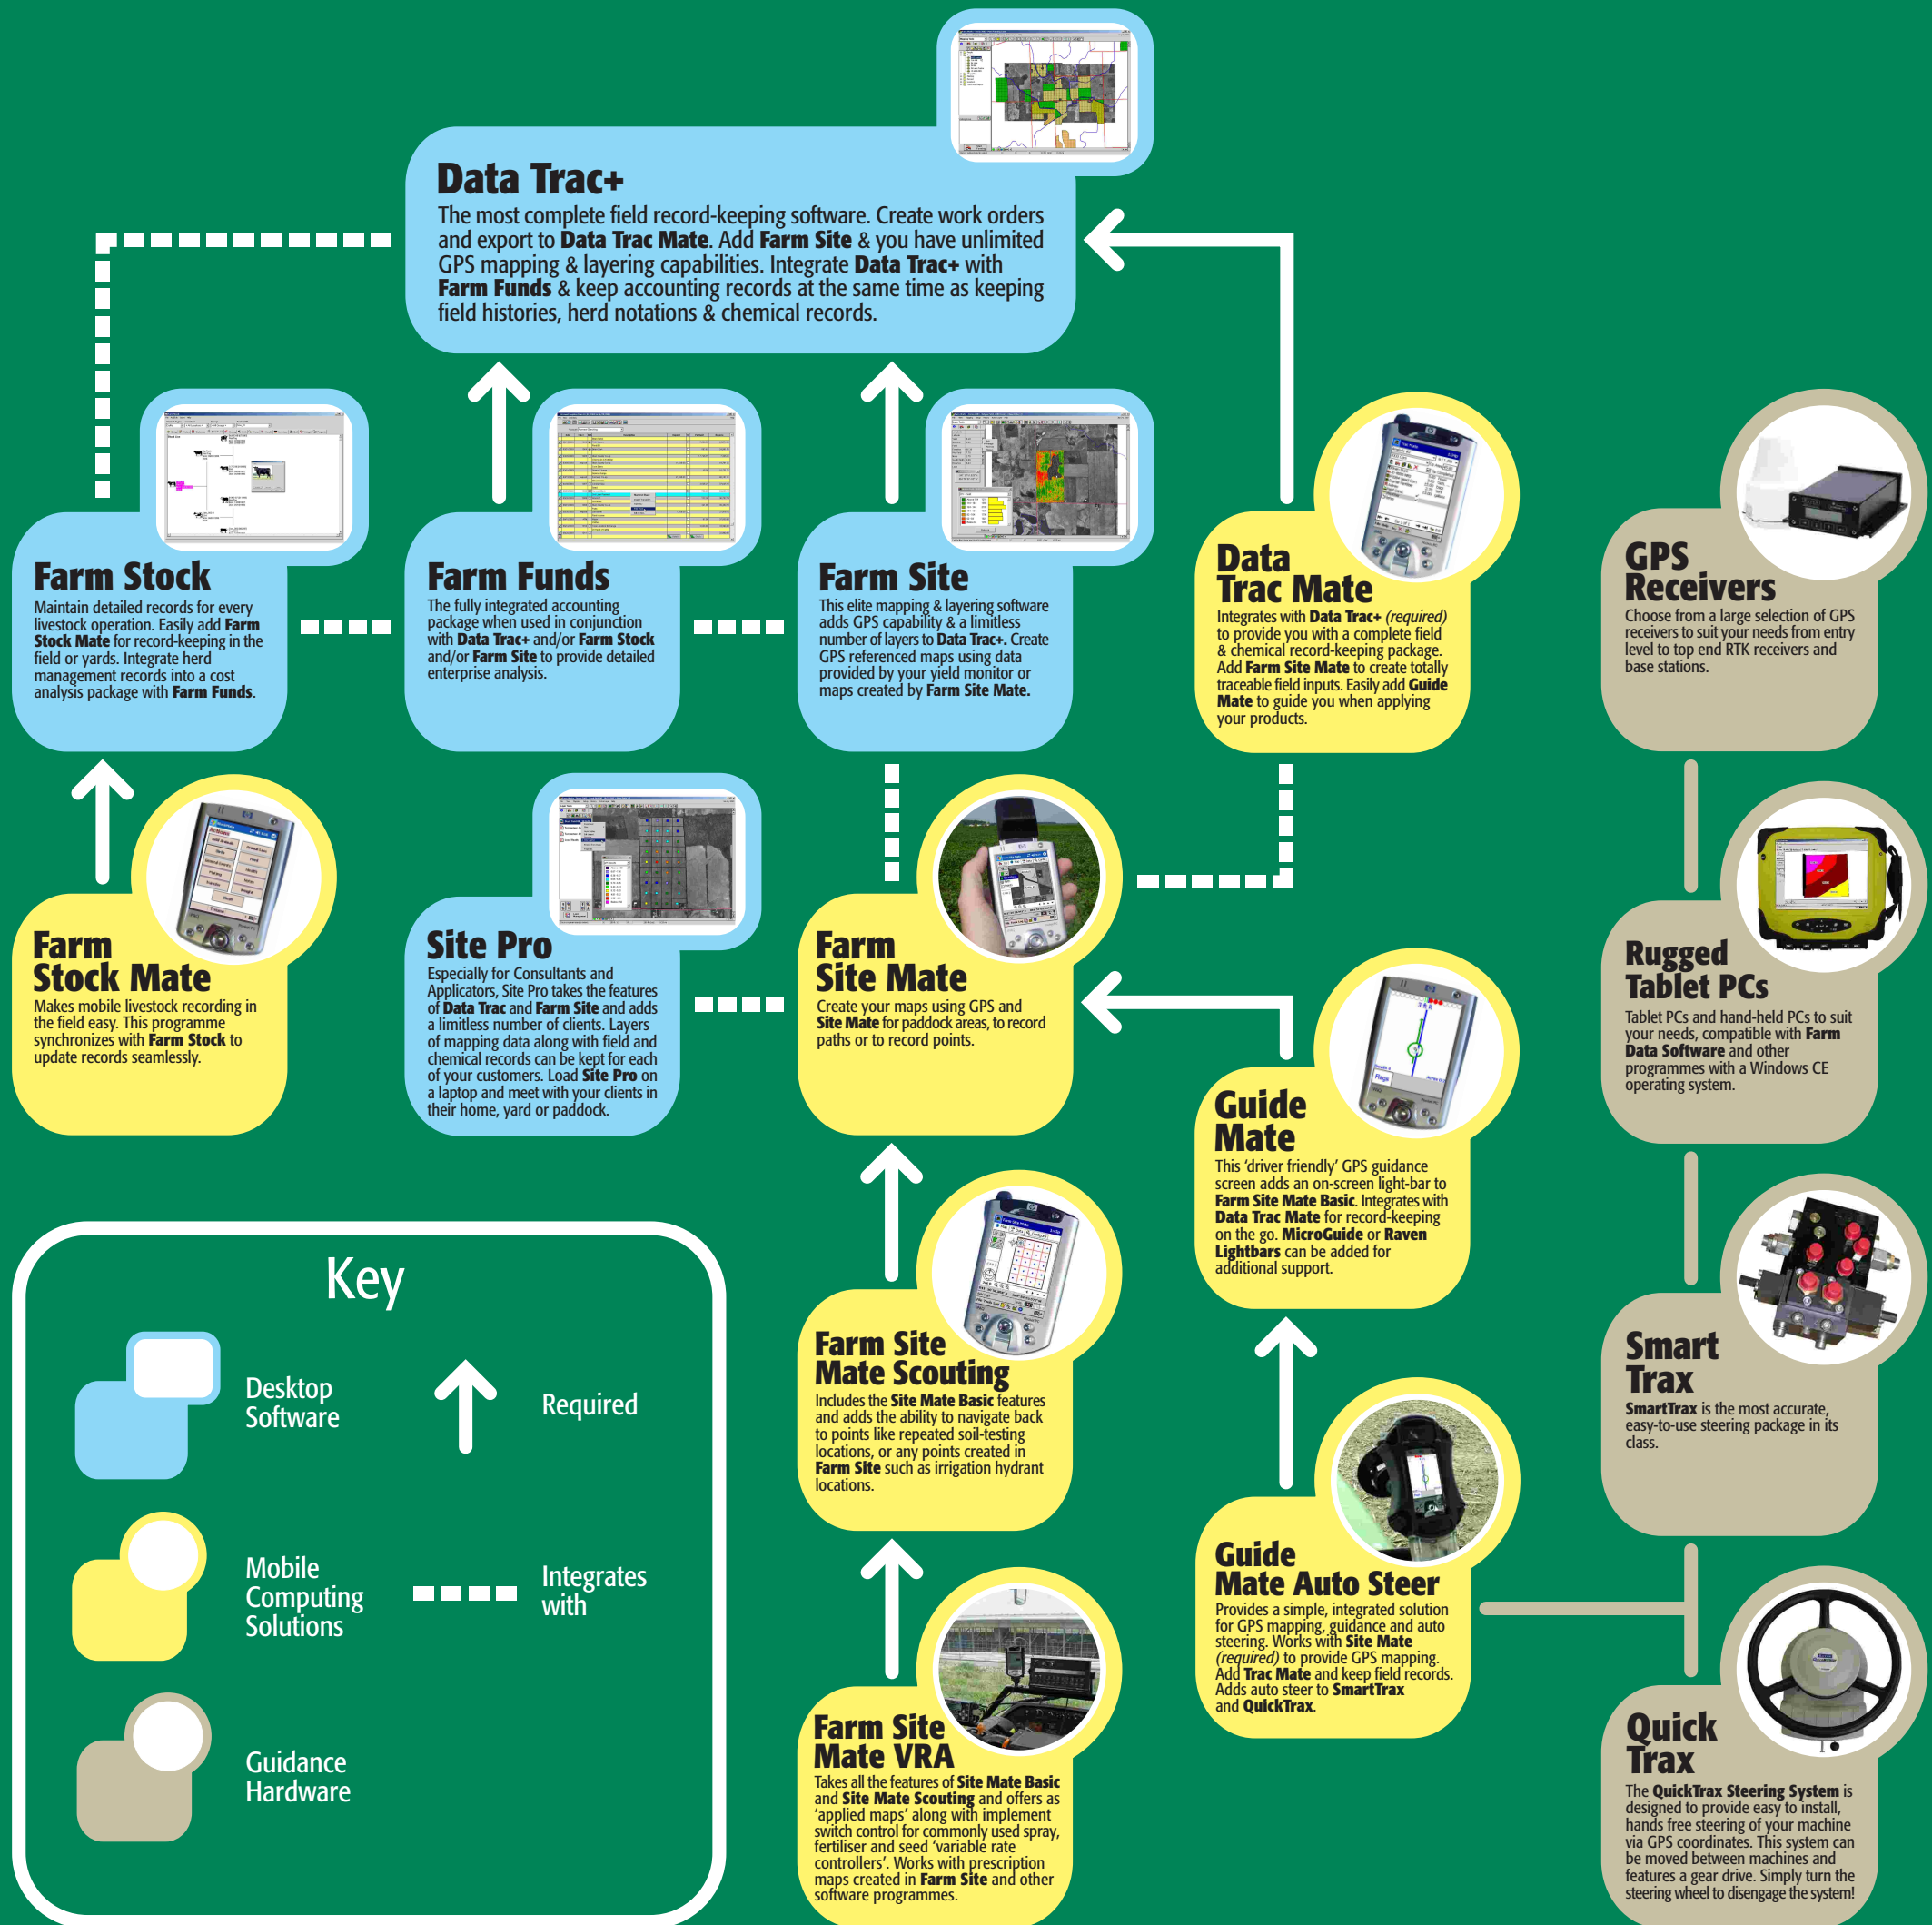

We can assist you to build your own precision ag system to run your farm more efficiently.

Increase your productivity with precision GPS products, reducing fuel costs, enhancing equipment efficiency, decreasing driver fatigue and eliminating overlap.

Traceability

Farm Data Software makes traceability easy. Keep automatic notations for field history noting cultivation practices, fertiliser rates, herbicide use, weather conditions, crop yields and chemical usage using **DataTrac+**. As well you can fulfil HASNO requirements using **DataTrac+** to record, sort and print chemical/pesticide reports and coordinate data required for use with quality assurance manuals. **Data Trac Mate** when used with **Site Mate** becomes the ultimate package for traceability. Use **Farm Funds** to keep a record of your entire inventory such as chemicals on hand and grains stored in each silo. These can be traced from the paddock where the crop was harvested to the point of sale. Using GPS and 'as-applied maps', you can see what you have applied and where it is in your fields.

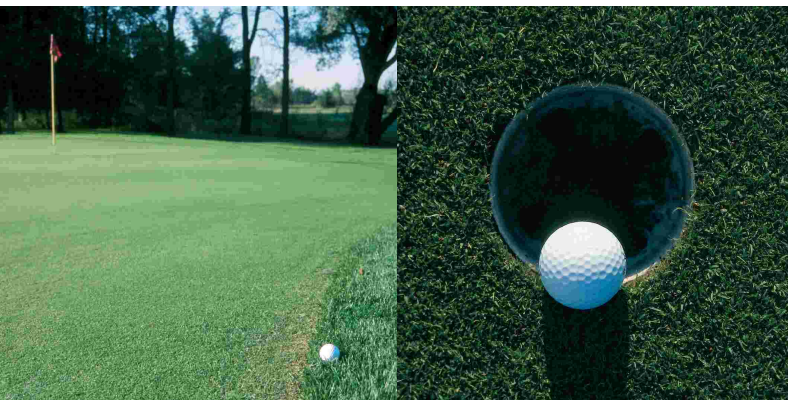

Farm Data, saving you time and money.

Precision
Course
Management

Precision Course Management features mapping and record-keeping software for golf course managers and greenkeepers. This software features chemical, fertiliser, weather and maintenance records along with golf course mapping that allows managers and greenkeepers to make maps such as course layouts, irrigation, drainage and other maps with GPS.

Support

Full software support options are available. Farm Data Software is easily upgradeable and is fully supported by a large team of programmers and support staff. Please inquire about our Hardware installation services.

Farm Data Software Limited

Farm Data Software is a division of CTN Data Services, Inc. www.ctndata.com

CTN Data Service, Inc. was incorporated in 1980 and is an employee owned corporation that serves the grain industry in the United States. A history of successful systems and support has contributed to a well-known reputation of quality for CTN Data.

Norman Teegardin, President of CTN Data Service, Inc. created Farm Data Software in the summer of 1992. Once a farmer himself, Teegardin knows how time consuming record keeping can be. The object of Farm Data Software is to create a comprehensive farm management system while keeping it simple.

The software currently has 25,000 users worldwide and CTN Data is continually improving existing software and developing new programmes for the agricultural industry.
